

"For us, Reconeyez is by far the best security system to use outdoors."

Joe Webb

Director of Operations
at M.S. Webb

Reconeyez for vacant property

Vacant property security is the second most common use case for Reconeyez systems. Thousands of security companies in over 60 countries count on Reconeyez for reliable and profitable security on vacant property.

Reduce deployment costs

Secure temporary sites with minimal cost. No more trenches to dig, cables to lay, power to source—the Reconeyez system is fully battery-powered. Reconeyez devices require no advanced technical skills to deploy and are up and running in 2 minutes.

Prevent and prosecute vandalism

Deter vandals with a Sentinel unit armed with a siren and a solar light, or conceal the detectors thanks to an invisible flash to prevent theft and tampering. Leverage numberplate detection and HD-quality alarm images for successful prosecution.

Reduce maintenance visits

Leverage remote site management and exceptional battery life of up to 400 days to reduce site visits. Our devices are reliable and durable in demanding environments—resistant to water, extreme temperatures, and physical damage.

Eliminate false call-outs

Leverage HD-quality alarm images and AI object detection to eliminate false call-outs and decrease reaction times. Reduce false alarms by 95% and receive AI-verified alarm images in 10 seconds.

About Reconeyez

Reconeyez is a wireless intrusion detection system with visual verification. Secure complex outdoor sites at a low total ownership cost: simplify installation and management, minimise site visits, and eliminate false call-outs.

Up to 400-day battery life

Optional solar charging

95% false alarm reduction

35m detection distance

HD-quality images

IP67-rated
